***AGC Europe's
coated glass keeps
evolving...***

CONTENT

Thanks to the right combination of solar and thermal performances, AGC's coated glass has made it possible to combine creativity, aesthetics and façade technology, while addressing today's environmental constraints. It is now time we brought you even more! AGC's main focus is always to provide you with the best coated glass possible, totally understanding your present needs and anticipating your future ones...

AGC GLASS EUROPE

AGC Glass Europe^() is the European branch of AGC Glass (Asahi Glass), the world's leading producer of flat glass.*

The company works with both raw glass (float glass, coated glass, laminated glass and mirrors) and processed glass (glasses for use in construction, the furniture and interior decoration industry, transport and various other industrial sectors).

AGC Glass is represented throughout the world. To contact our representatives in another country, visit www.yourglass.com, sales & services contact.

AGC has production sites throughout Europe, from Spain to Russia. 18 lines produce float glass and there are around 100 production lines. Backed by an organization focused on the customer, AGC ensures a commercial presence all over the world. The company continues this strategy thanks to the development of its distribution network, composed of regional centres (RDC) and local centres (LDC). These centres allow the customers to more easily and quickly reach the entire glass products range. AGC puts its Product Catalogue at its customers' disposal as well ; this online tool provides information regarding product availability and delivery times for leading AGC's products (more information on www.yourglass.com).

AGC's policy of permanent research has enabled it to become the European leader for up-to-the-minute glass technology (coated glass, complex glass etc.).

AGC has created special international teams with a view to meeting the most demanding requirements of architects and designers. The company has a website dedicated to construction and interior design applications (www.yourglass.com) that offers customised services such as calculation tools and references for architectural projects.

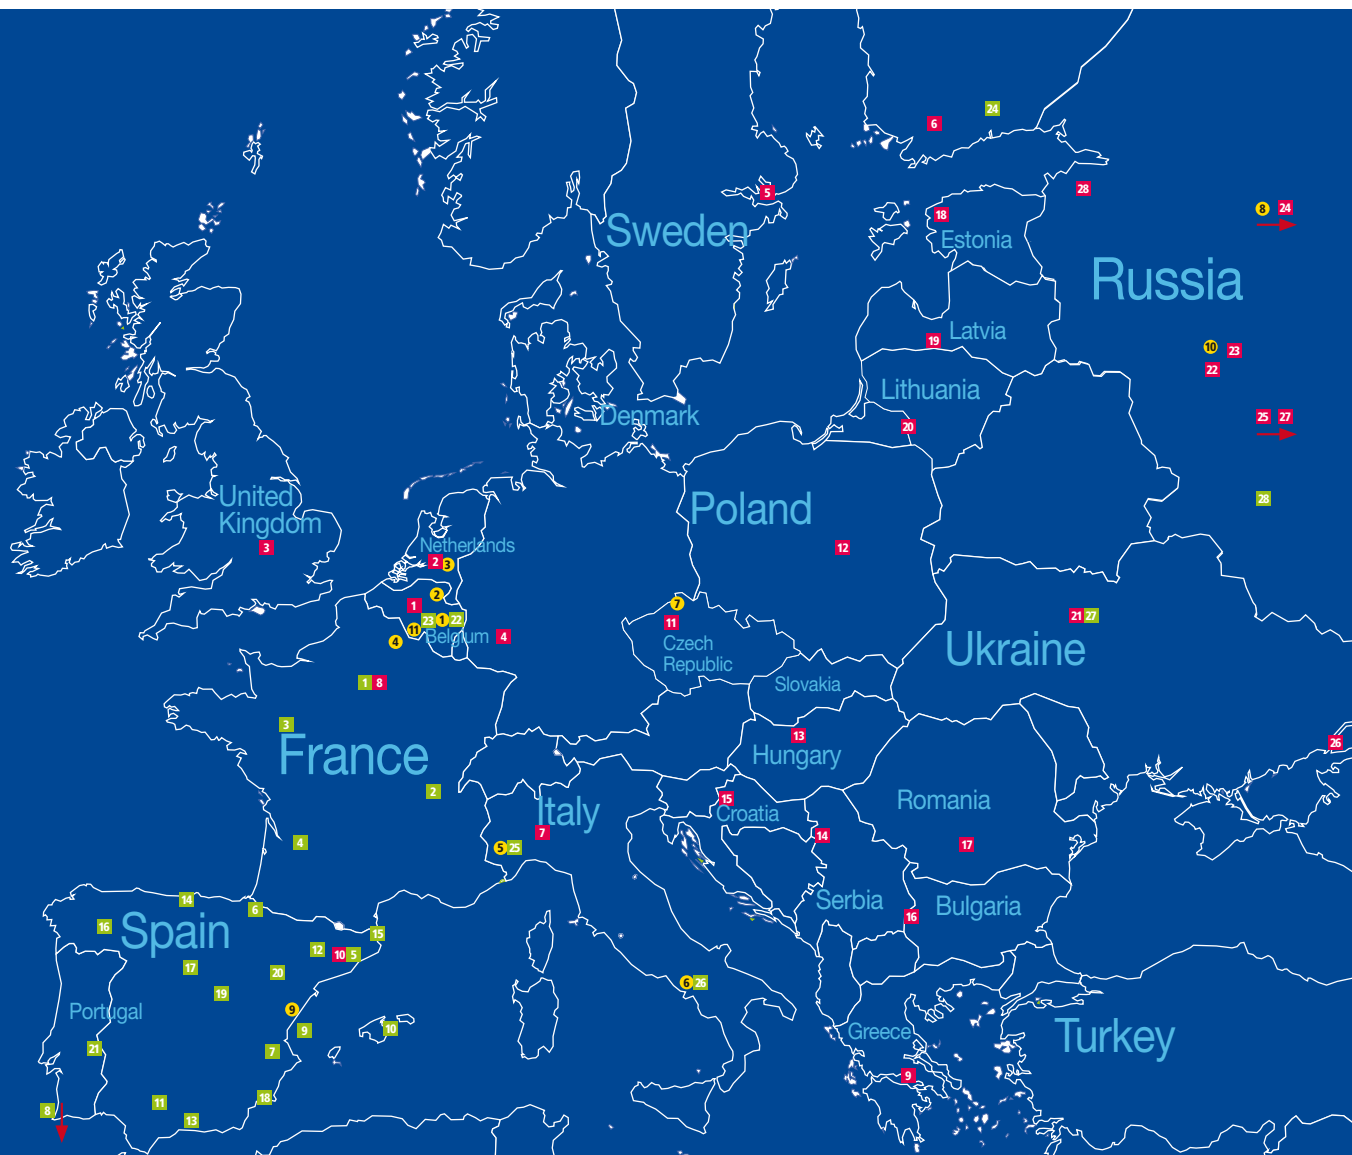

Furthermore, the site is available in nine languages – English, French, Spanish, Italian, Dutch, German, Czech, Polish and Russian.

AGC Glass Europe currently employs some 14,000 people.

For more information, go to : www.agc-glass.eu.

(*) In this document, AGC always refers to AGC Glass Europe.

AGC is firmly committed to its proactive environmental policy focusing on three key areas: products, production methods and transport. In 2010, AGC was awarded Cradle-to-Cradle certification for its float glasses and soft coatings ⁽¹⁾ under the Cradle-to-Cradle programme run by the independent organisation MBDC⁽²⁾.

What is Cradle to Cradle?

Cradle to Cradle (C2C) is a rigorous programme run by MBDC to assess how sustainable products are overall, i.e. over their entire lifecycle. The aim of this innovative approach is to certify the products manufactured by those companies with the most environmentally friendly production methods and components. This means gauging sustainability from the first stage of production right to the decomposition of the end products. The programme aims not only to evaluate and certify the quality of products, but also to measure their positive impact on

the environmental balance. In other words, the challenge is to model the industry on the principles of nature. This is truly a new industrial revolution! By adopting the philosophy and ethics of C2C, AGC has become a leader in this area of the glass industry (more details on www.yourglass.com). The Group is truly a pioneer in incorporating stringent environmental objectives into its production methods and end products.

For more information, see our environmental report on our corporate site: www.agc-glass.eu.

GALEO

STRATOBEL / ARTLITE / GLASSILED

BRUSSELS 2

SOUTH CITY

STOPRAY GALAXY ON CLEARVISION

Main solar control glasses ()*

Stopray	Soft-coated glass with maximum solar control and thermal insulation and a neutral appearance.
Sunergy	Neutral hard-coated glass with solar control and good thermal insulation.
Stopsol	Hard-coated reflective glass with solar control.

(*) In some countries, including Belgium, the Netherlands, France, Poland, Slovakia and the Czech Republic, all AGC glasses mentioned above are available as double-glazing.

Other architectural products ()*

Planibel clear	Clear float glass with a thickness of 2 to 25 mm. Available in clear, Clearvision and Linea Azzura (slightly blue-tinted).
Planibel coloured	Coloured float glass. Wide range of thicknesses and colours (Bronze, Grey, Green, PrivaBlue, Dark Blue, Azur, Dark Grey).
Planibel Low-E	Low-emissivity glasses with perfect thermal insulation. The AGC range includes Planibel G, Planibel A, Top ^{HR} , Top 1.0, Energy ^N and Tri. Some of these glasses are also available in a toughenable version.
Blackpearl	Hard-coated opacified glass – the perfect solution for spandrels.
Colorbel	Spandrels coated in opaque enamel that has been vitrified by heat treatment. Used for double or single glazing.
Lacobel T	Toughenable painted glasses, designed for use in façades and spandrels.
Stratobel	Laminated safety glass with one or several PVB interlayers. Stratobel can be assembled with any AGC float glass, including Stopray, Sunergy, Stopsol.
Stratophone	Laminated safety glass with one or several PVB interlayers with better acoustic protection.
Pyrobel-Pyrobelite	Fire-resistant laminated glass.
Imagin	Decorative glass – clear glass with a pattern printed on one or both sides. For decorative and architectural applications.
Glassiled	Laminated glass with embedded LEDs, ensuring transparency and light, for various applications in façades and interior decoration.
Artlite Digital	Tempered glass on which a whole series of colours, portraits or landscapes can be printed starting from a broad panel of colors and with various levels of opacity, which makes possible countless applications.

STOPPRAY

NEW 2012
Stopray Vision-60
is available from
April 2012

*Unparalleled performance in solar
and thermal protection*

1 BILBAO TORRE IBERDROLA
STOPRAY VISION-60*

2 SANTANDER SEDE AMBAR
STOPRAY VISION-50*

High performance glazing with numerous coatings of silver applied in a vacuum. The Stopray range offers an array of different colours and different degrees of protection from the sun and light transmission and reflection. The wide variety of options available in this range makes it the perfect solution in any climate conditions and for any aesthetic effect. Moreover, all Stopray glazing has a low U_g value.

Double silver coating, a smart choice

Glass with a double silver coating yield excellent solar and thermal performance at a great price.

Benefits

- > Excellent selectivity (LT to SF ratio = max. 2).
- > Can be used in any climate: Stopray offers solar protection in summer and thermal insulation in winter. It is particularly suitable for non-residential buildings with air conditioning as it helps to maintain a pleasant temperature while minimising energy costs.
- > Finish: wide choice of colours and levels of light transmission and reflection.
- > The appearance of Stopray glasses in Clearvision is even more neutral.
- > A toughenable version is also available.

ULTRAVISION

Take the best from the sun...

Stopray Ultravision products feature an innovative triple silver coating based on the latest glass technologies. The result is a new generation of selective glazings for use in the buildings of the future.

Benefits

- > The high light transmission level maximises natural light, yielding all the benefits of large indoor spaces bathed in light year round. The Stopray Ultravision range meets the most demanding requirements for use in commercial buildings.
- > The very low solar factor reduces solar gain, resulting in significantly lower air conditioning costs.
- > Excellent selectivity (ratio of light transmission to solar factor): always higher than 2.
- > Superb thermal insulation (thanks to a U_g value of $1.0 \text{ W/(m}^2\cdot\text{K)}$) minimises energy losses, resulting in major energy savings.
- > Superior appearance – attractive and neutral – combined with a low level of reflection.
- > Stopray Ultravision 50 is produced on Clearvision, AGC's extra-clear glass, to ensure greater transparency.

The Stopray Ultravision range is a wise investment: this combination of natural light, solar control and thermal insulation will reduce your lighting, air conditioning and energy costs.

Applications

The products Stopray Ultravision have been specifically designed for exterior applications in building façades.

Additional combinations

Stopray Ultravision can be combined with a wide variety of AGC's glazed products to give way to significant additional features.

- > Safety : the combination with Stratobel, AGC's safety glazing range, allows you to benefit from additional safety advantages.
- > Sound insulation : you can even benefit from high sound insulation performances by having Stopray Ultravision on Stratophone, AGC's sound insulation glazing range.

STOPRAY

*A double glazing
with a U_g -value
of $0.9 \text{ W}/(\text{m}^2 \cdot \text{K})$*

Enjoy the performance of combining AGC's soft and hard coatings: a whole range of 0.9 U_g-value products!

Improving our coated glass products, in terms of solar control as well as thermal insulation, has always been our main focus. Glass innovation is today more than ever our core activity for you to continually enjoy the most advanced glass technology advantages.

Description

The "0.9 U_g-value double glazing units" have been made possible due to the combination of one soft coating (a Stoprays with a U_g-value of 1.0 W/(m².K)) and the well-know AGC's pyrolytic coating Planibel G fasT (in position 4). This combination gives rise to unprecedented advantages such as highly improved thermal performances as well as a better solar factor. Practically speaking, you benefit from more energy savings both in the winter (thanks to the lowest U_g-value in the market) and the summer (lower Solar Factor). In other words, this innovation allows you significant savings as well as more interior comfort the whole year round.

Enjoy the performances of combining AGC's soft and hard coatings...

Titanium 37 ^{T (2)}	#2	Grey	33	7	25	66	0.29	0.9	Yes	Yes	Yes ⁽³⁾	Yes	3 months
Silver	#2	Neutral	40	48	26	29	0.30	0.9	No	No	No	Yes	3 months

⁽¹⁾ Values according to EN410. ⁽²⁾ This coating must be tempered to reach its final performances. For more information, please visit www.yourglass.com. ⁽³⁾ See conditions on www.yourglass.com. The combination of Planibel G fasT and Stoprays coatings will slightly change performances and aesthetics of the Stoprays range. In order to reduce risks of scratches and high haze effect AGC strongly suggests to use only Planibel G fasT or products made with equivalent 'G Fast technologies'.

SUNERGY

Sunergy rises to any architectural challenge – even the most difficult. With its low level of reflection and its extremely neutral appearance, Sunergy reflects current aesthetic trends. In addition, it is very easy to process, making it a favourite with glaziers all over the world. It can even be used in complex construction projects, such as projects involving curved glass, heat-strengthened glass, facades, single-pane glazing or silk-screen printed glass.

Sunergy provides a high level of solar protection and good thermal insulation. It is available in Clear, Green, Azur, Dark Blue and Grey.

Benefits

- > Unsurpassed appearance and visual comfort: high degree of light transmission and low level of reflection.
- > Especially neutral on clear float glass.
- > Interior comfort: excellent thermal insulation coupled with solar control when assembled in double glazed units.
- > Easy to process.
- > No limits on architects' creativity: one type of glass can be used for all applications.

For many years now, Stopsol has been the solar control glass preferred by processors, promoters and facade specifiers all over the world. Its reflection, perfect uniformity and exceptionally hard scratchproof and pollution-resistant coating have all played a major part in creating Stopsol's robust reputation. Processors particularly appreciate its pyrolytic coating, which is easy to toughen, curve and use in single or double glazing. Stopsol is available in nine colours and three types, making it the perfect glass for any architectural application.

Benefits

- > Reflective glass providing privacy and visual comfort.
- > Multiple combinations of solar control and light transmission levels and various colours.
- > No limits on architects' creativity: one type of glass can be used for all applications.
- > Easy to process.
